Preliminary Amdt.

NEW ABSTRACT:

Please replace the original abstract with the following new abstract:

Abstract of the Disclosure

The present invention relates to an electrical machine including a rotor shaft, a

hollow-cylindrical magnet element, a first covering disk, and a second covering disk, in

which the first and second covering disks are secured to the rotor shaft, and the magnet

element is secured on its first axial end to the first covering disk and on its second axial end

to the second covering disk.
